

# Black Rhodium

## Jive BiWire

Jive BiWire is the ideal choice for anyone who wishes to enjoy a smooth clean and musical sound quality when using modestly price equipment due to Black Rhodium's research and design processes, which are demonstrated in the following features and benefits:

- ✓ 2 core tin plated copper, 1.5mm<sup>2</sup> conductors, which not only offers ease of use, the single, connection between amplifier and loudspeaker but also delivers good imaging, as well as a clean, tight sound over mid and high frequencies, coupled with a well balanced rendition of lower frequency notes..
- ✓ Silicone rubber insulation, which offers low dielectric loss, reducing time smearing effects. This enables accurate portrayal of the attack of leading edges, as well as the natural decays in music.
- ✓ Resistance = 12.0Ω per kilometre, Capacitance = 143pF per metre.
- ✓ Advanced quality control of the direction of wiring during the production process, delivering superior stereo imaging, as well as lower background noise.
- ✓ Features an attractive white finish which fits unobtrusively into any background.
- ✓ Features our exclusive post curing process that removes impurities in the insulation, resulting in smoother sound less prone to harshness in music reproduction.
- ✓ Available with attractive metal bodied 4mm gold plated plugs for easy attachment to amplifier and speakers.
- ✓ Cable manufactured in England, ensuring that we have close, face-to-face contact with the manufacturing and production facilities, and also shows that we support and are proud of British manufacturing.

*". . . detail is very good across the range. . . . tonality in the midrange is highly neutral and we were particularly impressed with imaging, which is clear precise and stable across the board. There's also a good sense of control which makes this a very easy cable to like"*

*Hi-Fi Choice RECOMMENDED*

*"Well integrated treble and midrange, whilst bass is firm and detailing capable."*

*What Hi-Fi?*
