

Test & Technik Analog Spezial Tonarme

PRO-JECT 9CC EVOLUTION

Arm tube and headshell are made of a single piece of carbon, while the arm tube itself is conically shaped. 9cc Evolution utilises inverted ball bearings made from high-grade stainless steel. Azimut can be adjusted through rotation of the arm tube.

The Pro-Ject shares the following two features with other arms: A balance-point for the counterweight that is below the arm tube level and counterweights with Sorbothane damping.

Sonically without any shortcomings, Pro-Jects multi-talented tonearm offers a very affordable and solid basis for high quality cartridges, that will only perform best when mounted accordingly.

Below the line, the 9cc Evolution performs far above its price range. Its flexibility makes it a perfect companion for all who want to explore the quality of their cartridges, hopefully own an adequate turntable.

Roland Kraft

Pro-Ject 9cc Evolution

825 Euro

Length: 9 inch

Mounting distance: 212mm

Tracking force: counterweight

RATING

Extremely multi-talented universal tone arm, with straightforward mounting and adjustment. Exemplary scope of delivery, solid manual and last but not least a coherent and well-balanced sound.
